ReTrace Social VR Design Report

Three storyboards show a visitor using ReTrace Social VR. Each panel lists the user's action, the system's response and the feedback or control available.

Figure 2

Storyboard 1 – Understand why a gallery was suggested

1

USER User arrives in Gallery 4 (start state).

SYSTEM Provenance pop-up opens: "Why Abstract Art was suggested", 43% = mean of Abstract 50 and Expressionism 35.

Feedback: explanation shown before the user acts.

2

USER User closes the pop-up and presses H.

SYSTEM HUD and two wrist panels appear: inference, alternative, Undo, editable weights, top-3 list.

Control: the HUD is hidden until requested.

3

USER User selects "View provenance details".

SYSTEM Panel states why it was inferred, what might be wrong and what Undo does.

Feedback: says the inference is simulated.

4

USER User continues in Abstract Art, or selects Undo.

SYSTEM Continue: visitor stays in Gallery 4. Undo: visitor moves to the alternative gallery.

Control: the recommendation is a suggestion; the visitor decides.

Note. Screenshots of the prototype's interface layer. Orange outlines mark the area to look at, and pop-ups are cropped.

Figure 3

Storyboard 2 – Use the saved profile

1

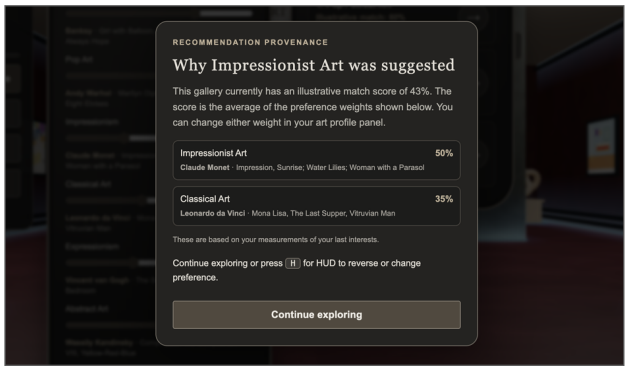

USER User presses H and sees “My saved preference”.

SYSTEM HUD shows the inference (Abstract Art 43%), the alternative and the saved-profile button.

Control: the saved profile is offered beside Undo.

2

USER User selects “My saved preference”.

SYSTEM Pop-up opens: “Why Impressionist Art was suggested”, 43% = mean of Impressionist 50 and Classical 35.

Feedback: the saved profile is explained before the move.

3

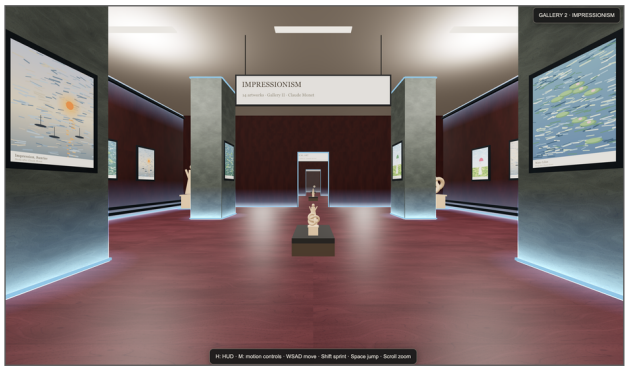

USER User closes the pop-up.

SYSTEM Visitor is now in Gallery 2 (Impressionism). The HUD shows the saved weights (Impressionism 50, Classical 35).

Feedback: the HUD shows where the visitor is and which weights are active.

4

USER User presses H to hide the HUD.

SYSTEM A clear view of the Impressionism gallery remains.

Control: H reopens the HUD at any time.

Note. Screenshots of the prototype’s interface layer. Orange outlines mark the area to look at, and pop-ups are cropped.

Figure 4

Storyboard 3 – Reverse a mistaken inference with Undo or by changing weights

1

USER User presses H and looks at the inference.

SYSTEM HUD shows the inference (Abstract Art 43%), the alternative (Pop / Street Art 80%) and Undo.

Control: Undo is offered next to the inference, and the interest weights can be adjusted.

2

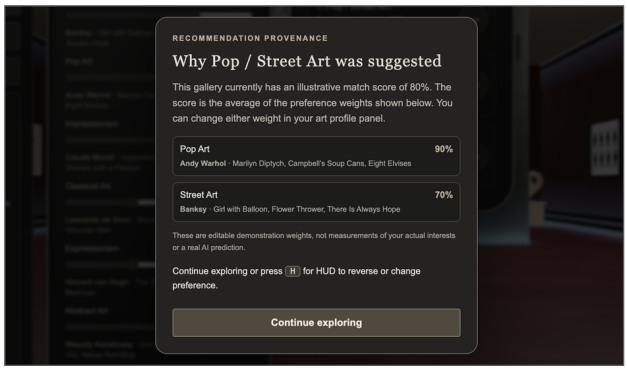

USER User selects “View provenance details”.

SYSTEM The panel explains that Undo reverses the simulated inference. The top-3 list shows Pop / Street Art, Abstract Art and Impressionism.

Feedback: the user can read what Undo does before using it.

3

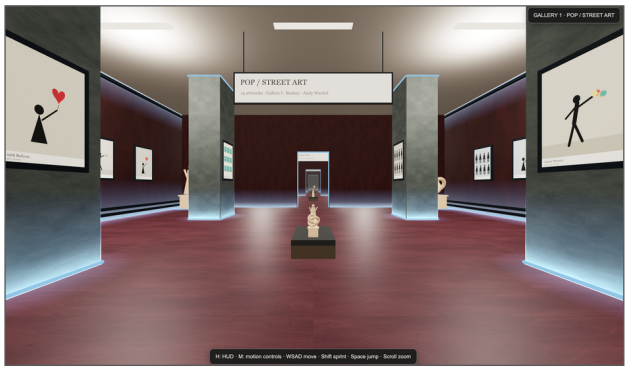

USER User selects “Undo this inference & explore alternative”.

SYSTEM Pop-up opens: “Why Pop / Street Art was suggested”, 80% = mean of Pop Art 90 and Street Art 70.

Feedback: the new suggestion is explained too.

4

USER User continues exploring.

SYSTEM Visitor is now in Gallery 1 (Pop / Street Art). The weights are unchanged.

Control: Undo reverses the inference, not the user's weights.

Note. Screenshots of the prototype's interface layer. Orange outlines mark the area to look at, and pop-ups are cropped.
